

Why was the ban on blood products lifted in 2021 in the UK?

It was originally put into place due to CJD concerns

Hi everybody! It's been quite a while hasn't it? I am sorry about that but I was very busy doing stuff to try to save the humans. It's so weird that that statement is true. Just looking at my calendar sometimes, that incidentally, I got from a lovely reader, I feel overwhelmed. But it's actually pretty clear now!

My eyes are a bit blood shod in this photo because I finally paddled out today and got my first hang 5 (not wrap around, but I'll take it) in about half a year. I also got flipped by a wave that barreled and that hurt a lot. I almost had the wind knocked out of me, but all good. Every now and then I get these precious lessons from mother sea - she reminds me that I am not in control and that getting hurt is part of it sometimes. When I think about it, walking back and forth barefoot on a 9'3 fiberglass beast while it is moving quickly on a meter high wave whilst dodging speed-bumps, sounds kind of stupid. But I love it more dearly than anything else in this life. *It is life in action*. It was an amazing session (can you tell? I sound like I am in love), and I saw flying fishies - with their little arms splayed, flying through the air. They are so beautiful. Sigh.

So recently (Feb 25, 2021) they halted the ban on blood products in the UK. In fact, they did so in the middle of a 'pandemic'. In fact, they did so in the middle of an experimental injectable product roll-out! They did this happily because they claim that they wanted to manufacture immunoglobulins from the blood products of UK citizens as opposed to US citizens, for the first time since 1998. Note what is written on the website (link above) below:

The [UK-sourced blood plasma] ban was introduced in 1998 in response to concerns over the spread of a human variant of BSE, known as 'mad cow's disease', called Creutzfeldt Jakob Disease.

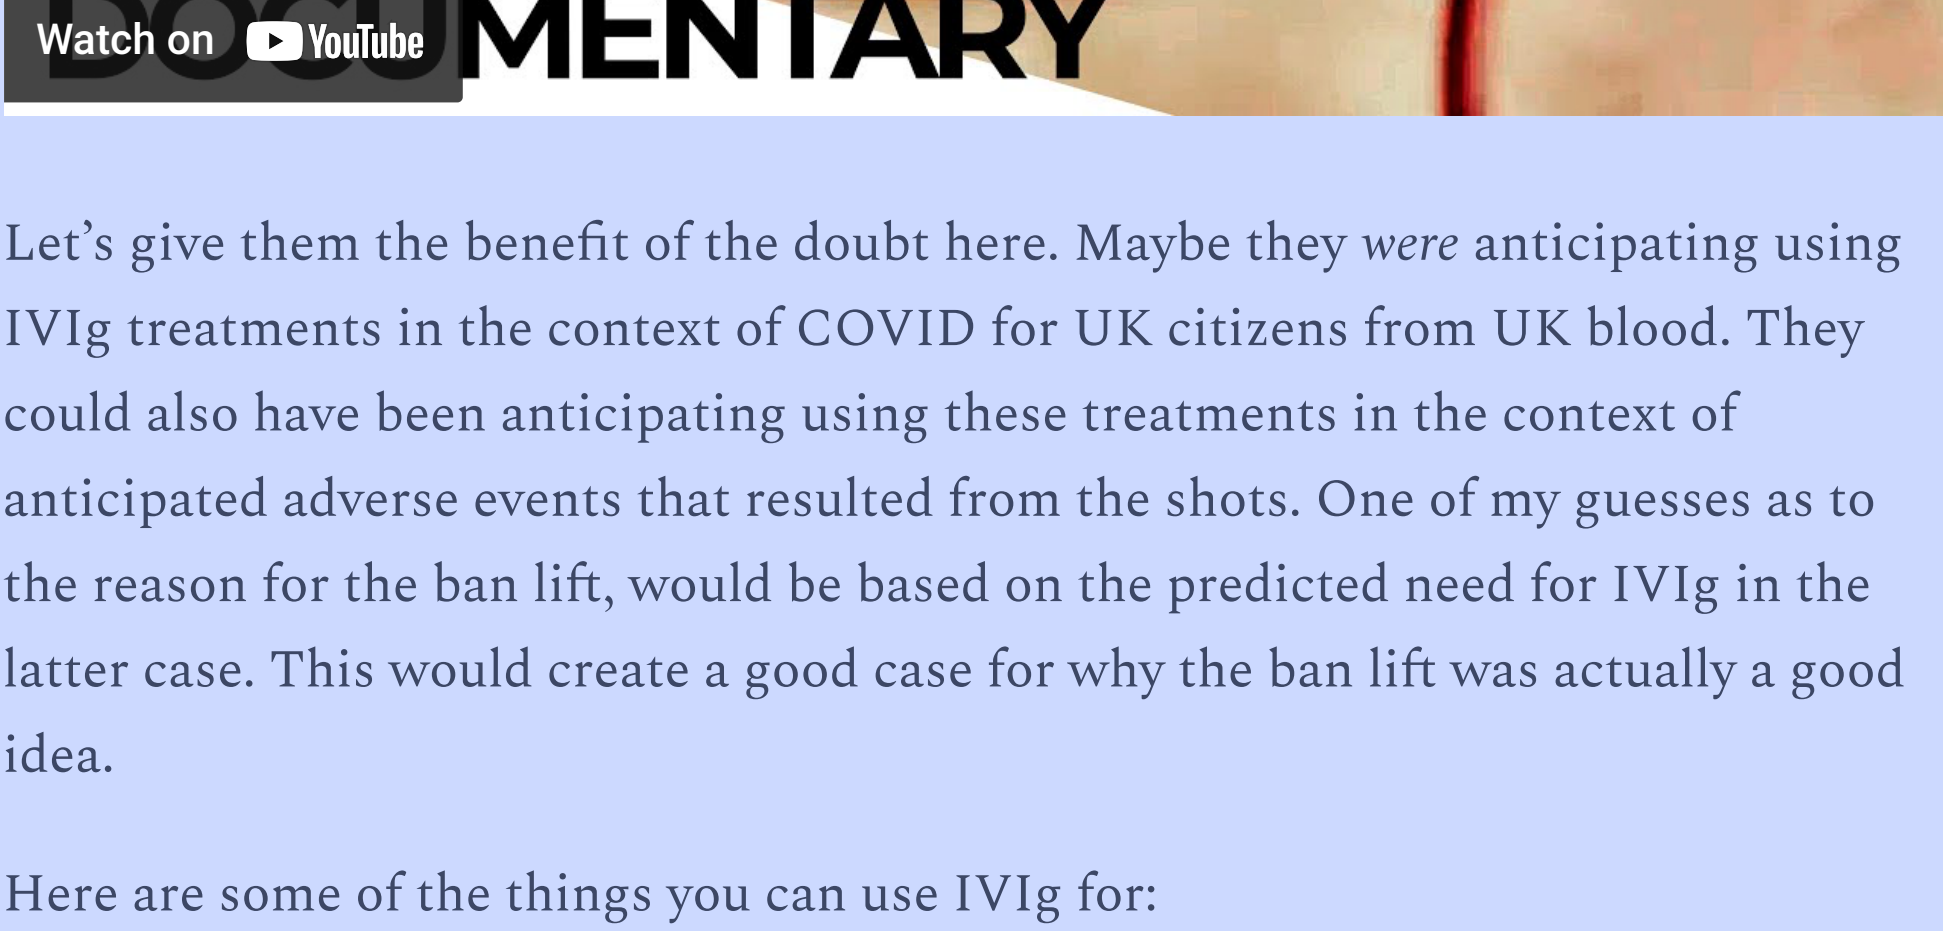

I vaguely recall something about this but didn't pay much attention. Back then, I was just like the majority of people - I just listened to 'authorities' and 'did what was recommended'. I think it was probably a good idea to enforce this ban since, as I have written about many, many times, Creutzfeldt-Jacob Disease (CJD) is NOT something you want to mess around with. Please refer to [my previous articles](#) to read more.

The part that is leaving me scratching my head is why, of all times, would they lift the ban in the middle of a so-called pandemic, and in the middle of an experimental injectable product roll-out? They claim it was based on a slow down of supply of blood/plasma products from the US, but... Really? Was it about getting UK blood to UK citizens to treat COVID? Betsy Bassis thinks so. Or, could it have been for some other reason?

We also look forward to exploring the opportunity of fractionating convalescent plasma for the production of hyper-immunoglobulins to treat COVID-19.

Betsy Bassis, Chief Executive at NHS Blood and Transplant (NHSBT)

Before you do anything else, watch this documentary on the plasma industry. Yes, the plasma industry. Some call it the 'New Cannibalism'.

Let's give them the benefit of the doubt here. Maybe they *were* anticipating using IVIg treatments in the context of COVID for UK citizens from UK blood. They could also have been anticipating using these treatments in the context of anticipated adverse events that resulted from the shots. One of my guesses as to the reason for the ban lift, would be based on the predicted need for IVIg in the latter case. This would create a good case for why the ban lift was actually a good idea.

Here are some of the things you can use IVIg for:

Some of the diseases that intravenous immunoglobulin (IVIg) can treat include:

How Does It Work?

What Are the Possible Side Effects?

- Immune deficiencies like immune thrombocytopenia (ITP)
- Kawasaki disease
- Guillain-Barre syndrome
- Chronic inflammatory demyelinating polyneuropathy
- Lupus
- Myositis
- Other rare diseases
- Neurological diseases like myasthenia gravis or multiple sclerosis
- People who receive bone marrow transplants may also use IVIg to prevent infections.

<https://www.webmd.com/a-to-z-guides/immunoglobulin-therapy>

A couple of these 'diseases' sound familiar but for the life of me, I cannot figure out why.

The reason 'they' gave for the ability to lift the ban after all this time is quoted below:

Experts in medicine safety at the independent Commission on Human Medicines (CHM) have now advised the use of UK-sourced plasma to manufacture these treatments is safe and can recommence supported by a set of robust safety measures.

Well, it's good to know that the plasma is safe now. There's nothing to be worried about of course, because the recommencement of blood product collection will be supported by a set of robust safety measures. I wonder WHO these robust safety measures will be carried out by? I don't know much about Lord Bethell or the experts that the almighty consulted with, but I do know, at this point, I don't trust any of them. Oh wait, I spoke too soon! The MHRA and June Raine herself are adjudicators. Phew. We're fine.

Following the ban lift, whole blood was collected. Whole blood collected from people who were injected with mRNA COVID products? This blood could very well contain spike protein, based on the literature.^{1 2} I wonder, are they going to be including screening of spike in their robust safety measures? Ruh roh...

Another of my guesses as to the reason for the ban lift, would be based on another episode of symptom laundering. Besides the fact that this is likely subterfuge under the guise of treating 'COVID' to treat injection injuries - which is ok - except for the lying and stuff, I think that it is a stretch that, in the context of a protein that is now suggested to be prion-like (amyloidogenic/prion-inducing) and associated with none other than CJD^{3 4}, there isn't some other subterfuge going on here. My guess is that since we are seeing many cases of CJD emerging in the context of the COVID shots (there are 84 reports as of May 5, 2023 in VAERS), that this might be a nice way to cover it up. A potential connection between CJD and the shots has been fact-checked, so we know it's a possibility.

Imagine this scenario: The gov stat people are seeing a safety signal for CJD coming out of the Yellowcard reporting system. They're like, hey, what the? But we already injected everyone! What're we gonna do?! No one can find out about this - it will cause a panic! If the powers-that-be then removed the ban on blood product collection and use in the UK, and all of a sudden there is an 'outbreak' of CJD, presto! It came from the tainted blood supply. That happens, right? There. You've got your scapegoat. Man, I sound like a frikkin' crazy person writing this. But then again, I am still writing it. I think most of what I write is just really good fiction. At least, that's what I'll call it now to avoid tra-bools. If you know what I mean.

All that the powers-that-be would have to do at that point is to say, whoops, we lifted the ban in earnest, but prematurely! We must replace the ban! That will fix everything because we said it will. But then again, what about the people who might be succumbing to injection-associated prion-like diseases later on, as part of some late onset effect of spike-induced damages?

Better question: Why the hell aren't we a community of people that helps each other any more? Jayzuz.

I hope I am just being stupid and paranoid here, but the fact that I am QUESTIONING myself on that is something else I am thinking about. It seems entirely far-fetched that the powers-that-be would ever be so devious, but then again, I personally, am a very ethical and sound being, so of course it's hard for me to entertain that level of corruption. But I do.

For the sake of sanity, we can assume that they were just going for IVIg for treatment of COVID, and let the rest go as coincidence. But if we do this, we must remain diligently in question-mode. Nothing is as it seems. You guys know what I think on this particular subject matter, but nonetheless, question what I think, and let me know what you think.

Last note: During my surf this morning, it was so clear to me how easily it is for the cultists, the 'leaders', the 'masters' to rule over the masses. We - the mass - don't really have the capacity to even conceive of the depth of the depravity that some of them dwell in, which is unfortunate one hand because born from their depravity is our reality: the reality of our existence in the modern day world where most of us are pretty much slaves to commercialism. Whether we like it or not. On the other hand, not 'going there', not seeing things that we are not ready to see, and not seeking out things we are not ready to face, is also a good survival technique.

Today, for some reason, I had to remind myself, out loud, to the fishies, that I am a free, sovereign being - born to this world with inalienable rights, and I have the RIGHT to be happy, sad, to work, to not work, to simply be free.

We must all remind ourselves of this every single day. WE. ARE. FREE.

As I recollect the Pfizer phase 3 trial had more deaths in the treatment group than the placebo group, at which point the trial stopped and the placebo group got 'the treatment'. Your suggestion on blood plasma fits with that.

Nobel Laureate Dr Luc Montagnier reported that these mRNA shots are not vaccines, they are poisons, in his last speech before the Luxembourg Parliament in January of 2022 (just three weeks before he died!). He had 21 patients who died from a fast-progressing CJD, all who died within five months following their second COVID injection (one took Moderna, the rest had Pfizer).

Here in the US, many areas refused to allow people to put aside their own blood prior to an operation (known as an autologous blood donation), which had been allowed prior to COVID. They also refused to separate the COVID vaccinated donated blood from the unvaccinated donated as well, even though it was basically using blood tainted with an experimental injection that had a 20 year history of killing all the vaccinated animals in all the animal trials of "Antibody Dependent Enhancement" (immune erosion)! The 20 year history of all the mRNA vaccinated animals dying was reported by Dr Lee Merritt, a former Naval Surgeon, so I believe this is true.

I found this out when I was getting ready to have double hip replacements last summer. I chose to NOT take a blood transfusion (and possibly die), rather than take accept possibly tainted blood. Interestingly, only one doctor questioned why I would make this choice, all nurses said they understood my decision.

Q

This is one of the emails I received the other day. I get hundreds daily, and I am hearing you all.

This particular note spoke loudly to me and this lovely person gave me permission to share her words.
